Meet in Italy for Life Sciences 2019
NUTRACEUTICALS WORKSHOP Cluster ALISEI – Cluster CLAN

Wednesday, 16 October 2019
14.30 - 16.30
Trieste, Magazzino Molo IV - Room 3

ITALIAN LEADERSHIP
IN NUTRACEUTICALS:
EXCELLENCE AND OPPORTUNITIES
FOR GROWTH

PROGRAMME

14.30 - 15.00  Keynote speaker
Giovanni Scapagnini
«Where are nutraceuticals going? New trends and future scenario»

15.00 - 15.15  Marco Macchia
«Nutraceuticals and integrated research»

15.15 - 15.30  Sauro Vittori
«Healthy food: research and applications»

15.30 - 15.45  Patrizia Brigidi
«Biodiversity of the Mediterranean diet and the development of healthy food»

15.45 - 16.00  Paolo Morazzoni
«Innovations in nutraceutical sector: scientific, regulatory and productive aspects»

16.00 - 16.15  Enrica Bandini
«The milk, a natural functional food and a good vehicle for functional nutrients»

16.15 - 16.30  Discussion
Meet in Italy for Life Sciences 2019
WORKSHOP NUTRACEUTICA Cluster ALISEI - Cluster CLAN

CO-CHAIRS

Enzo Grossi
Scientific Advisor, Cluster ALISEI

Germano Scarpe
President, Biolfa SpA

SPEAKERS

Giovanni Scapagnini
Professor of Biochemistry and Molecular Biology at the Department of Medicine and Health Science at University of Molise, Campobasso, Italy

Marco Macchia
Professor of Chemistry and Pharmaceutical Technologies, Department of Pharmacy at University of Pisa, Italy

Sauro Vittori
Professor of Food and Drug Analysis, Rector's Delegate for the National Research, School of Pharmacy at University of Camerino, Italy

Patrizia Brigidi
Scientific Advisor Cluster CLAN, Professor in Fermentation Biotechnology, Rector's Delegate for the European Research, Department of Pharmacy and Biotechnology at University of Bologna, Italy

Paolo Morazzoni
Scientific Advisor of Indena SpA, Milano, Italy

Enrica Bandini
Research & Development Director of Parmalat

Functional foods are products of the food industry that possess proven physiological benefits that go beyond their nutritional role thanks to their natural enrichment in specific beneficial active ingredients.

Food supplements are products developed by the pharmaceutical industry that contain active nutritional ingredients derived from food, in the form of pills, capsules or sachets.

Both products can be classified as "nutraceuticals", a term created in 1989 by Joseph De Felice to understand a symbiosis between nutrition and pharmaceuticals.

Nutraceuticals represent a new consumer sector in which the Italian pharmaceutical industry and the food industry are investing heavily to provide effective solutions for improving health or reducing the risk of disease through prevention. In this sector, Italy is second only to the United States in terms of scientific production and can boast an enlightened vision that does not limit itself to considering food supplements as nutraceutical but enhances the natural constituents of our quality regional foods and boasts extraordinary development potential, both for the presence of numerous natural products and for the industry's ability to formulate very pleasant and potentially effective products.

All this will be discussed on October 18, 2019 in the workshop Meet in Italy for Life Sciences 2019 in Trieste entitled: "Italian leadership in nutraceuticals: excellence and opportunities for growth".
